

## Chapter 17

### MEDIA QUERIES

- The syntax of media queries is given below:
- **@media type and (condition: breakpoint) {**
- **// CSS Rules**
- **}**
- The general advice is to adjust the page for the largest screens and then do so for smaller screens.
- The common media query breakpoints for CSS are given below:

Breakpoint	Description
< 481px	Mobile Devices
481px - 768px	iPads, Tablets
769px - 1024px	Small screens, Laptops
1025px - 1200px	Desktops, Large Screens
>= 1201px	Extra Large Screens, TV

- The media query breakpoints for Bootstrap CSS are given below:

Breakpoint	Description
< 576px	xs
>= 576px	medium
>= 992px	large
>= 1200px	xl
>= 1400px	2xl

- Some examples of properties that can be used in **condition: breakpoint** are: **min-width**, **max-height** and **min-aspect-ratio**.
- The most commonly used property in **type** is **screen**.
- The Developer Mode allows websites to be tested in screen sizes belonging to different devices.
